

Jordan Lee

Senior Software Engineer | Distributed Systems, Platform Architecture, Technical Leadership

New York, NY | jordan.lee@example.com | 555-0198 | linkedin.com/in/jordanlee | github.com/jordanlee

PROFESSIONAL SUMMARY

Senior software engineer with 11 years of experience designing distributed systems, cloud platforms, and high-scale product infrastructure. Deep background in TypeScript, Go, Java, Kubernetes, AWS, event-driven architecture, observability, and reliability engineering. Leads cross-functional technical strategy, mentors engineers, and turns business goals into resilient systems that teams can operate safely.

CORE SKILLS

Languages	TypeScript, Go, Java, Python, SQL
Architecture	Distributed systems, event-driven design, microservices, API design, system design
Cloud Platform	AWS, Kubernetes, Docker, Terraform, service mesh, CI/CD
Data Systems	PostgreSQL, DynamoDB, Kafka, Redis, Elasticsearch, data modeling
Reliability	Observability, OpenTelemetry, SLOs, incident response, performance tuning
Leadership	Technical strategy, mentoring, architecture reviews, stakeholder communication

PROFESSIONAL EXPERIENCE

Senior Software Engineer - AtlasCloud Systems

New York, NY | January 2021 - Present

- Led architecture for a multi-tenant workflow platform processing 45 million events per day with Kafka, Go services, and Kubernetes.
- Reduced critical incident frequency by 38 percent by introducing SLOs, OpenTelemetry tracing, runbooks, and production readiness reviews.
- Designed a permission and policy service adopted by 14 product teams, standardizing authorization across web and API surfaces.
- Mentored 7 engineers through design reviews, pairing, promotion planning, and incident follow-up practices.
- Partnered with security and compliance teams to implement audit trails, data retention controls, and customer-facing export workflows.

Staff-Track Backend Engineer - FinGrid Payments

Remote | April 2017 - December 2020

- Built Java and Spring Boot payment orchestration services with idempotency, retry controls, and automated reconciliation.
- Migrated monolithic billing jobs into event-driven services, cutting monthly close processing time from 9 hours to 90 minutes.
- Introduced Terraform modules and GitHub Actions pipelines that reduced environment setup time from days to under 1 hour.
- Improved PostgreSQL query performance for ledger views by adding indexes, materialized aggregates, and service-level caching.

Software Engineer - CivicApps Lab

Boston, MA | July 2013 - March 2017

- Delivered public sector web applications using React, Node.js, PostgreSQL, and AWS for transportation and permitting teams.
- Created API documentation and onboarding guides that helped new developers contribute production changes in their first sprint.

SELECTED PROJECTS

Skill Gap Recommendation Engine - Designed a ranking service that compares candidate profiles to job requirements and returns transparent weighted score factors.

Platform Reliability Scorecards - Built service scorecards combining deployment frequency, incident volume, latency, error budgets, and ownership metadata.

EDUCATION

Master of Science in Computer Science - Northeastern University, 2013

Bachelor of Science in Software Engineering - Rochester Institute of Technology, 2011

CERTIFICATIONS AND LEARNING

AWS Certified Solutions Architect - Associate, 2022

Kubernetes Application Developer training, 2023
